Ageing Tips

Temperature: 12-15°C is a great temperature to store your wines. Most importantly, reduce frequent temperature fluctuations.

Storage: Bottles are best stored on their sides to keep the cork moist.

Humidity: A relative humidity of 50-70% will keep the corks in a supple condition and keep air out.

Sulphite Level: If your wine is being aged for more than 6 months, add an extra 1/4 tsp to 23 litres of wine. This will ensure the safety of your wine.

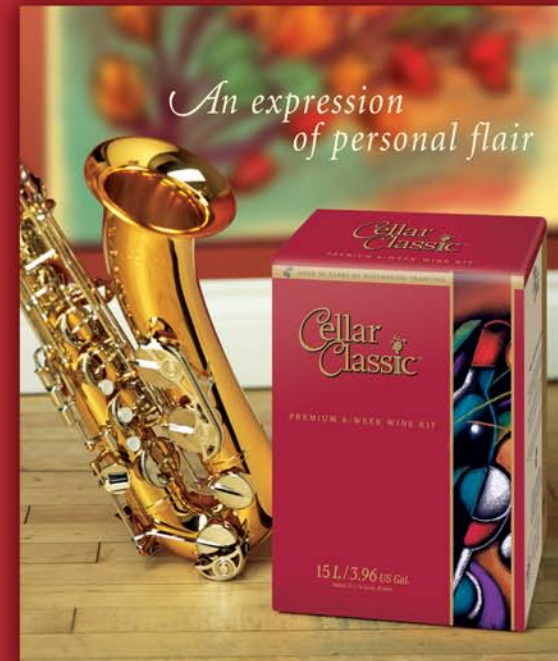

Light: Try to keep the cellar dark when not in use. Avoid fluorescent lights – they emit UV light that can be harmful to your wine.

Movement: Constant agitation tends to disturb sediment, creating a haze.
